

Week 3 Reading and Exercises
STT 422: Summer, 2004
Vince Melfi

Here are reading assignments and exercises we'll be covering during the week of May 30th. (There are only two days of classes due to the Memorial Day holiday.) Unless I explicitly indicate otherwise, you can always skip the "beyond the basics" sections.

Readings and exercises

- Read all of Chapter 11 except the "Beyond the basics" section. We will be going beyond the text's treatment of multiple regression models in class, where we'll cover general F testing for comparing models and variable selection methods. Exercises are 11.2, 11.3, 11.4, 11.5, 11.13, 11.19, 11.21, 11.32, 11.33, 11.34.

Homework to be collected on Monday, June 7

Note that the due date is Monday, not Friday. Write up and turn in Exercises 10.32, 11.32, and 11.34. Remember that you can turn in one assignment per team. Just remember to put all team members' names on the assignment.
