## Are online courses the right choice for you?

Thursday, April 26, 2012  
A405 Wells Hall  
3:00 - 3:50 p.m.  
Refreshments: 2:40 p.m.

### Abstract

This will be an informal discussion of my experiences with online education over the past 4 years. I will discuss some of the pros and cons involved with online learning. Due to current economic conditions, pressures coming from non-traditional and traditional students are increasing the number of courses/programs offered online. Such pressures have created the need to transform mathematical/statistical based classes into new forms. In conjunction with this it has been challenge to bring students up to speed with todays technology.
